

I still have questions about what we are trying to do with separation of variables in spherical coordinates.

- A. Yes, definitely, let's talk about what we are trying to do (briefly).
- B. I have some questions, but I think I got the gist of it. We can move on.
- C. I got it, let's move on.

$$V(r, \theta) = \sum_{l=0}^{\infty} \left( A_l r^l + \frac{B_l}{r^{l+1}} \right) P_l(\cos \theta)$$

V everywhere on a spherical shell is a given constant, i.e.

$V(R, \theta) = V_0$ . There are no charges inside the sphere.

Which terms do you expect to appear when finding  
V(inside)?

- A. Many  $A_l$  terms (but no  $B_l$ 's)
- B. Many  $B_l$  terms (but no  $A_l$ 's)
- C. Just  $A_0$
- D. Just  $B_0$
- E. Something else!

The general solution for the electric potential in spherical coordinates with azimuthal symmetry (no  $\phi$  dependence) is:

$$V(r, \theta) = \sum_{l=0}^{\infty} \left( A_l r^l + \frac{B_l}{r^{l+1}} \right) P_l(\cos \theta)$$

Consider a metal sphere (constant potential in and on the sphere, remember). Which terms in the sum vanish outside the sphere? (Recall:  $V \rightarrow 0$  as  $r \rightarrow \infty$ )

- A. All the  $A_l$ 's
- B. All the  $A_l$ 's except  $A_0$
- C. All the  $B_l$ 's
- D. All the  $B_l$ 's except  $B_0$
- E. Something else

Given  $V_0(\theta) = \sum_l C_l P_l(\cos \theta)$ , we want to get to the integral:

$$\int_{-1}^{+1} P_l(u) P_m(u) du = \frac{2}{2l+1} \quad (\text{for } l = m)$$

we can do this by multiplying both sides by:

- A.  $P_m(\cos \theta)$
- B.  $P_m(\sin \theta)$
- C.  $P_m(\cos \theta) \sin \theta$
- D.  $P_m(\sin \theta) \cos \theta$
- E.  $P_m(\sin \theta) \sin \theta$

$$V(r, \theta) = \sum_{l=0}^{\infty} \left( A_l r^l + \frac{B_l}{r^{l+1}} \right) P_l(\cos \theta)$$

Suppose  $V$  on a spherical shell is:

$$V(R, \theta) = V_0 (1 + \cos^2 \theta)$$

Which terms do you expect to appear when finding  $V(\text{inside})$ ?

- A. Many  $A_l$  terms (but no  $B_l$ 's)
- B. Many  $B_l$  terms (but no  $A_l$ 's)
- C. Just  $A_0$  and  $A_2$
- D. Just  $B_0$  and  $B_2$
- E. Something else!

$$V(r, \theta) = \sum_{l=0}^{\infty} \left( A_l r^l + \frac{B_l}{r^{l+1}} \right) P_l(\cos \theta)$$

Suppose  $V$  on a spherical shell is:

$$V(R, \theta) = V_0 (1 + \cos^2 \theta)$$

Which terms do you expect to appear when finding  **$V(\text{outside})$** ?

- A. Many  $A_l$  terms (but no  $B_l$ 's)
- B. Many  $B_l$  terms (but no  $A_l$ 's)
- C. Just  $A_0$  and  $A_2$
- D. Just  $B_0$  and  $B_2$
- E. Something else!
